

DATA AVAILABILITY: TOP/FLOP 5 COUNTRIES

The 5 countries where most - and least - information was collected about single land deals. *Source: Land Matrix data (April 2012)*

The Land Matrix collects as much information as possible about reported land deals: type of investment, produce, size, year, investor company name and location etc. The percentage of data availability is calculated by comparing the number of available information versus information it was not possible to collect. It is a quantitative representation: it doesn't imply or comment on the quality of data collected.

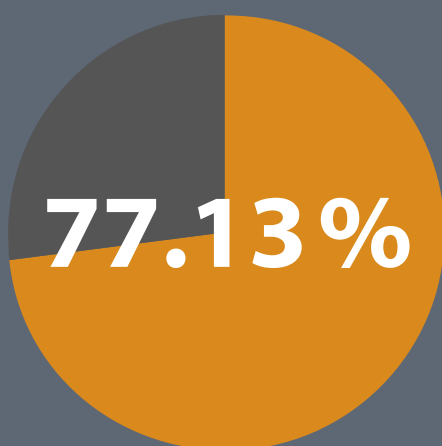

DEMOCRACY INDEX MEASURES THE STATE OF DEMOCRACY IN 167 COUNTRIES

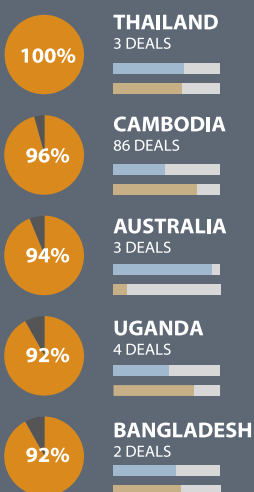

CORRUPTION PERCEPTION INDEX MEASURES THE PERCEIVED LEVELS OF PUBLIC SECTOR CORRUPTION IN 178 COUNTRIES
